

Grøn Agenda Sydhavn

Sommerfugleengens insekter o.a.

Arbejdsversion: 22-9-2020
(første høslæt på området var i 2015)

A close-up photograph of a small butterfly, likely a Common Blue (Glaucopsyche alexandria), perched on a plant with reddish, serrated leaves. The butterfly's wings are primarily orange with several distinct black spots on the forewings and a blue-grey border. The background is a soft-focus green field of grass. The image is framed by a dark green border.

Lille ildfugl (a)

Lille ildfugl (b)

Dagpåfugleøje

Det hvide C (a)

A close-up photograph of a brown butterfly with a white 'C' mark on its wing, perched on a green leaf. The butterfly's wings are brown with some darker spots and a white 'C' mark on the forewing. The leaf is bright green with visible veins and some small holes. The background is a blurred green forest.

Guldflue sp.

Spyflue sp. (a)

A close-up photograph of a blue fly with prominent red eyes perched on the edge of a green, spiny thistle leaf. The fly's wings are spread, and its body is a vibrant blue. The background is a soft-focus green, suggesting a natural outdoor setting. The fly is positioned in the center of the frame, facing slightly to the right.

Jordhumle

A close-up photograph of a bumblebee on a flowering plant. The bee is positioned in the center-left, facing right, with its head and legs on a small white flower. The flower is part of a larger cluster of similar flowers, some of which are purple. The background is a soft-focus green, suggesting a natural outdoor setting. The lighting is bright, highlighting the textures of the bee's fur and the petals.

Agerhumle (a)

A close-up photograph of a bumblebee perched on a vibrant purple thistle flower. The bee is positioned on the right side of the flower head, facing left. Its body is covered in black and yellow fur, and its wings are partially visible. The flower has a dense cluster of small, bright purple florets. The background is a soft-focus field of tall green grasses and other thistle plants, creating a natural, outdoor setting. The lighting is bright and even, highlighting the textures of the bee and the flower.

A crane fly (Stankelben) is perched on a green grass stem. The fly has a long, slender body, long legs, and large, transparent wings with visible veins. The grass stem it is on has several small yellow spots. The background is a blurred field of green and yellow grass. The image is framed by a dark green border.

Stankelben

Skovmyre (*Formica* sp.) og bladlus

Blå mosaikguldsmed

Kileplet-mosaikguldsmid

A close-up photograph of a dragonfly perched on a branch with several bright red berries. The dragonfly is positioned in the center-right of the frame, facing left. Its wings are spread, showing a delicate, grid-like pattern. The berries are round and have a small yellowish-green calyx at the top. The background is a soft-focus mix of green foliage on the left and a clear blue sky with light clouds on the right. The entire image is framed by a solid green border.

Hedelibel sp. (a)

A close-up photograph of a dragonfly perched on a piece of weathered, greyish-brown wood. The dragonfly has a reddish-brown body and transparent wings with visible veins. The wood is cracked and textured. In the background, there is a blue metal fence and green grass. The image is framed by a green border.

Hedelibel sp. (b)

Korsedderkop (a)

A close-up photograph of a brown spider on its web. The spider is positioned in the center of the frame, facing downwards. Its body is a mottled brown color with some lighter patches. The web is made of thin, clear threads that are slightly out of focus. The background is a soft, out-of-focus green, suggesting a natural outdoor setting. The lighting is bright, creating some highlights on the spider's body and the web threads.

Bænkebidder sp.

A close-up photograph of a snail resting on a rough, textured rock surface. The snail's shell is prominent, featuring a pattern of alternating brown and yellowish-brown stripes. The rock surface is uneven and appears to be made of a light-colored material, possibly limestone or a similar sedimentary rock, with various cracks and small holes. The lighting is natural, highlighting the textures of both the snail and the rock.

Ubestemt

A close-up photograph of a grasshopper, likely a species of katydid, camouflaged among a dense thicket of dry, light-brown grass and plant matter. The grasshopper's body is a mottled brown and tan, blending perfectly with the surrounding dry vegetation. In the upper right corner, a single green leaf is visible, showing several distinct holes, suggesting it has been eaten. The overall scene is a natural, outdoor setting with a focus on the insect's camouflage.
